

PROJECT DESCRIPTION

To create a space for students at Walnut High School to fully enjoy their celebrated musical program, the school district orchestrated the development of the 10,100 sf band building.

Two large practice rooms joined by spacious private practice rooms, instrument and uniform storage rooms, staff offices, musical library, and restroom facilities. The band room is 3,200 sf with access to a mezzanine for string instruments. The orchestra room contains over 2,100 sf for performing musical harmony. The ensemble of interior spaces are brought together with a large volume of clear space over 18' tall, and the exterior features a building that stands at 26' tall.

The building design focused on delivering a highly efficient harmonious musical learning environment. All rooms include occupancy sensors to minimize unnecessary use of light when rooms are unoccupied. Dual switching is available to assist lighting levels from the 60 dimmable tubular skylights. These design strategies will provide this new state-of-the-art band building a major reduction in electrical usage.
